Learning Objectives:

1. Summarize the four key goals of this training.
2. Explain how and why this training prepares people to be “educational paramedics”.

The Pitch

We know as much about teaching and learning as we do about public health. The problem is, most programmers and professors don't even know what we know.

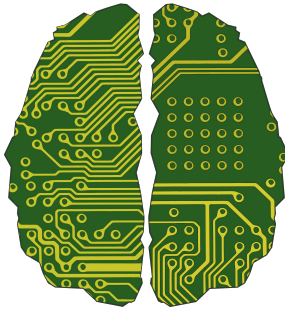

The Pitch

1. Build more effective lessons
2. In less time and with less effort
3. That are easier for peers to find and reuse
4. And know what impact they're having

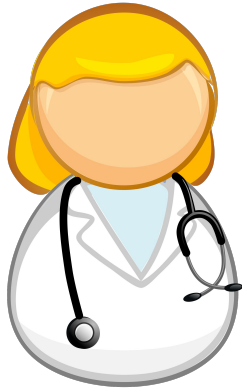

A few basic facts will help you build more effective lessons in less time and with less effort, that are easier for your peers to find and reuse, and to know what impact those lessons are having on users.

Starting Point

Our key insight is that learning is both a *cognitive* and a *social* activity. Learning occurs when your brain stores facts and procedures in ways that allow you to recall and apply what you need when you need it. It also occurs in a social setting: you learn for reasons, with other people, and your goals, motivations, and criteria for success are determined with them and by them. Our other key insight is that both teaching and learning must be *active*: a teacher reciting a lesson to a learner who simply listens is provably less effective than engagement on both sides.

Educational Paramedics

One other thing we need to make clear is that we're not trying to turn you into a doctor. We are more like educational paramedics: our focus is on providing front-line service to those who are in need right now, and who may not have the time or the interest to fill in the general background. Neither is better than the other: they serve different purposes.
