Learning Objectives

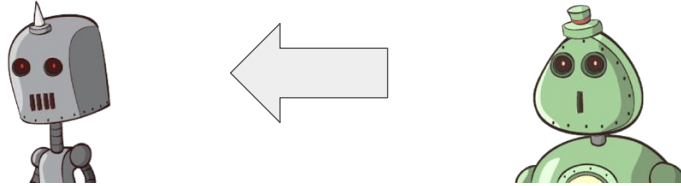

1. Describe the key differences between static teaching materials and dynamic lesson presentation, and the role of improvisation in the latter.
2. Describe the elements of a basic rubric for giving feedback on live teaching.
3. Explain the four steps an instructor should take every time they make a coding mistake in front of a class.
4. Critique recorded and live lesson presentations.

Teaching is a Performance Art

When you are teaching, you are a performer like any other. Your primary purpose is to engage the audience's attention and convince them that what you're saying is worth listening to. If you do that, there's a chance they will learn; if you don't, they might as well read a book.

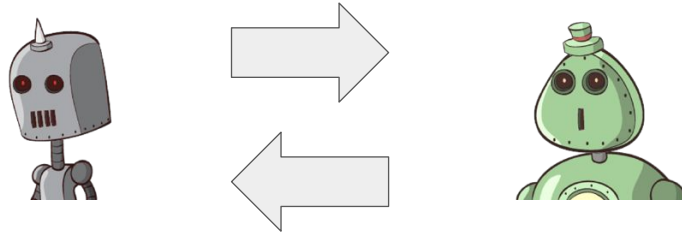

Step 1: Get Feedback

So how do we get better at teaching? In step 1, we get feedback on what we're doing from someone more knowledgeable.

Description: a friendly gray robot on the left, a friendly green robot on the right, and an arrow pointing from the green robot to the gray robot.

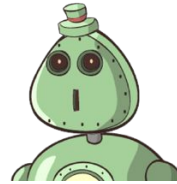

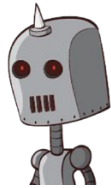

Step 2: Get Feedback on Feedback

In step 2, we give feedback, and get feedback on that feedback.

Description: a friendly gray robot on the left, a friendly green robot on the right, and arrows between them pointing in both directions.

Step 3: Feedback Loop

My work here
is done

Step 3 is where the magic happens. Once we know how to critique, we can critique ourselves as we're working. In musical terms, we're listening to our own performance as we play. That feedback loop is so tight and so rewarding that our ability immediately takes off.

Description: a friendly gray robot on the left with an arrow curving around to point from it back to itself. A friendly green robot on the right with the caption "My work here is done."

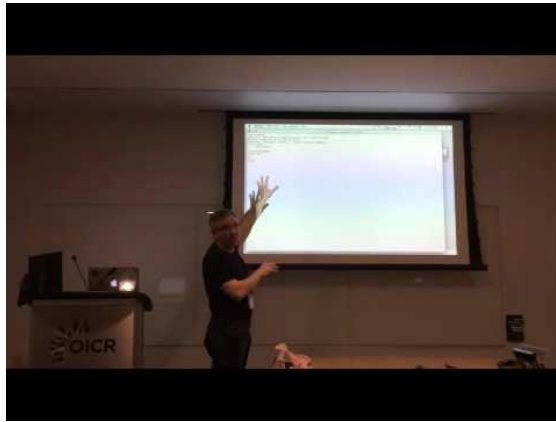

Exercise

What is the single worst thing the instructor in the following video does?

What is the single worst thing the instructor in the following video does? (Name only one thing.)

Teaching Badly

<https://youtu.be/-ApVt04rB4U>

To start this process, watch this video and make notes using the rubric on what you think the instructor is doing poorly or not doing at all.

A Simple Rubric

Negative	Positive	
		Content
		Presentation
		Interaction

8

This rubric is the simplest way to give feedback on someone's teaching. It separates positive from negative and *content* (what's said) from *interaction* (how the instructor interacts with learners and manages the classroom) and *presentation* (how they speak). It isn't always clear which category something goes in, but it does help organize and compare comments.

Description: a grid with two rows and three columns. The columns are labeled "Content", "Interaction", and "Presentation". The rows are labeled "Positive" on the top and "Negative" on the bottom.

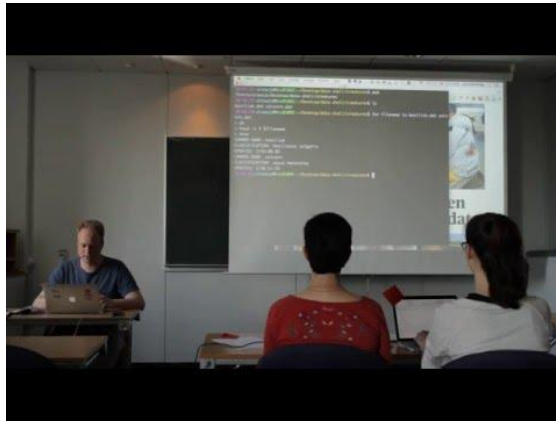

Exercise

Give feedback on the video in the next slide using the 2x2 rubric.

Give feedback on the video in the next slide using the rubric. Did having the rubric help or was it a distraction?

Teaching Poorly

<https://youtu.be/bXxBENkKmJE>

Watch this video and make notes using the rubric on what you think the instructor is doing poorly or not doing at all.

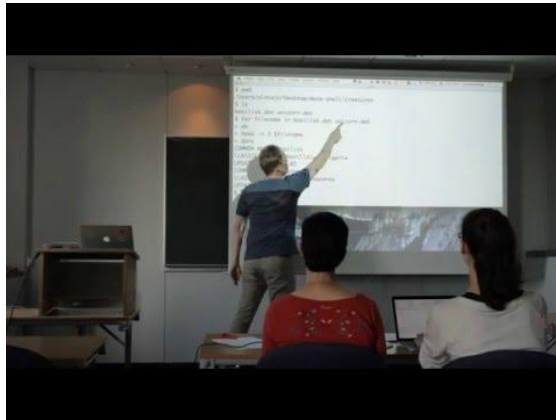

Exercise

Give feedback on the video in the next slide using the 2x2 rubric. Instead of reporting “positive” and “negative”, report “better” and “worse” compared to the previous video.

Give feedback on the video in the next slide using the rubric. Instead of reporting “positive” and “negative”, report “better” and “worse” compared to the previous video.

Teaching Well

https://youtu.be/SkPmwe_WjeY

Now watch this video and make notes on the rubric about what the instructor is doing *better*.

Exercise

1. Explain something to your partner(s) in 2 minutes while they take notes using the rubric.
2. Exchange roles.
3. Share feedback with the class but do *not* identify who the feedback is about.

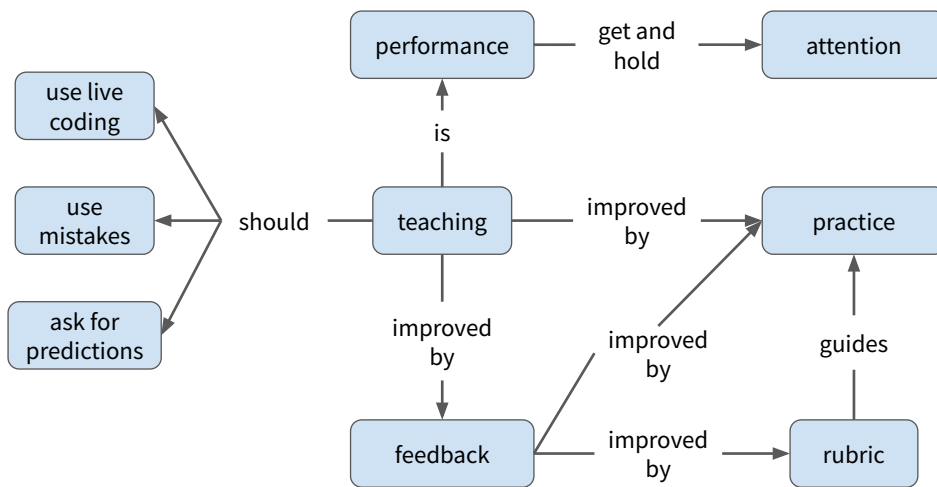

Now it's your turn. Explain the topic of your choice to your partner, speaking for 2 minutes, while they take notes on the 2x2 rubric. When you are done, exchange roles, and then share your feedback with the class.

Exercise

1. Pick one thing from the unified feedback that you want to keep doing well.
2. Pick one thing from the unified feedback that you want to add or improve.

Look at the unified feedback. What is one thing you already do well that you want to keep doing? What is one thing that you don't do that you would like to add, or do poorly and would like to improve?

Concept map for performance.
